24938A

## CLAIM AMENDMENTS FOR CONSIDERATION - NOT FOR FILE ENTRY

1. (Proposed Amendment) A trim panel insulator for a vehicle, consisting essentially of:

a single, multidensity nonlaminate acoustical and thermal insulating layer of polymer fiber selected from a group consisting of polyester, a combination of polyester and fiberglass, polypropylene and any mixtures thereof wherein said acoustical and thermal insulating layer includes a skin defined as a processed first surface of said acoustical and thermal insulating layer, said skin being formed by applying heat to a first surface of said acoustical and thermal insulating layer during the molding of said acoustical and thermal insulating layer.

## 2. (Canceled).

- 3. (Previously Presented) The insulator of claim 1, including a first facing layer over a first face of said acoustical and thermal insulating layer, said first facing layer being constructed from a material selected from a group consisting of polyester, rayon, polyethylene, polypropylene, ethylene vinyl acetate, polyvinyl chloride, fibrous scrim, metallic foil and mixtures thereof.
- 4. (Previously Presented) The insulator of claim 3, including a second facing layer over a second face of said acoustical and thermal insulating layer.
- 5. (Previously Presented) The insulator of claim 4, wherein said acoustical and thermal insulating layer has a weight per unit area of between about 20-130 g/ft<sup>2</sup>.

24938A

- 6. (Original) The insulator of claim 5, wherein said acoustical and thermal insulating layer and said first facing layer are approximately the same color.
- 7. (Original) The insulator of claim 5, wherein said acoustical and thermal insulating layer, said first facing layer and said second facing layer are approximately the same color.
- 8. (Proposed amendment) A trim panel insulator for a vehicle, <u>consisting</u>
  <u>essentially of [comprising]</u>: a single, nonlaminate acoustical and thermal insulating layer
  of polymer fiber selected from a group consisting of polyester, a combination of polyester
  and fiberglass, polypropylene and any mixtures thereof also including a nonlaminate skin
  of polymer fiber along at least one face of said acoustical and thermal insulating layer,
  said nonlaminate skin having a higher density than a remaining portion of said insulating
  layer.
- 9. (Previously Presented) The insulator of claim 8, including a first facing layer over a first face of said acoustical and thermal insulating layer, said first facing layer being constructed from a material selected from a group consisting of polyester, rayon, polyethylene, polypropylene, ethylene vinyl acetate, polyvinyl chloride, fibrous scrim, metallic foil and mixtures thereof.
- 10. (Previously Presented) The insulator of claim 9, including a second facing layer over a second face of said acoustical and thermal insulating layer.

24938A

- 11. (Previously Presented) The insulator of claim 10, wherein said acoustical and thermal insulating layer has a weight per unit area of between about 20-130 g/ft<sup>2</sup>.
- 12. (Previously Presented) The insulator of claim 11, wherein said acoustical and thermal insulating layer and said first facing layer are approximately the same color.
- 13. (Previously Presented) The insulator of claim 11, wherein said acoustical and thermal insulating layer, said first facing layer and said second facing layer are approximately the same color.
- 14. (Proposed to Cancel) The insulator of claim 1, wherein the insulating layer includes a skin having a higher density than a remaining portion of the insulating layer.
